

AI Stock Assistant - Project Report

Name: Priyansh Bhatt

Introduction:

AI Stock Assistant is a Streamlit-based web application that provides real-time stock market analysis using Python and yfinance. Users can search for stocks and get live price trends with basic buy/sell suggestions.

Objective:

To build an interactive application that helps users analyze stock trends using live market data and technical indicators.

Technologies Used:

- Python
- Streamlit
- yfinance
- Pandas

Features:

- Real-time stock price
- Interactive chart visualization
- Time range selection
- Buy/Sell/Hold suggestions using Moving Averages

Methodology:

The application fetches stock data using yfinance. Moving averages (MA20 and MA50) are calculated to identify market trends and provide suggestions based on technical analysis.

Conclusion:

This project demonstrates the integration of Python, Streamlit, and financial APIs to create a user-friendly stock analysis platform.
